

# Satellite Imagery and Vessel Monitoring Through UNITAR

Introducing UNITAR's Capacity Building Work on Enhancing Maritime Security

*8th High-Level Meeting on Djibouti Code of Conduct, Mauritius, Nov 2025*

**Sascha Weh**  
*UNITAR Division for Peace*

## About UNITAR

The United Nations Institute for Training and Research (UNITAR) provides innovative learning solutions to individuals, organizations and institutions to enhance global decision-making and support country-level action for shaping a better future.

Leveraging on having UNOSAT as programme of UNITAR; The United Nations Operational Satellite Applications Programme (UNOSAT) delivers satellite imagery analysis, geospatial solutions, and capacity-building services to strengthen evidence-based decision-making in humanitarian response, development, peace, and security operations.

# Training Fundamental Goals

AIS data ONLY input from the vessels in a specific region

**Space & Ground based AIS**

Satellite imagery input for the same region, including dark vessels.

**Space imagery**

Satellite imagery analysis identifying and verifying dark vessels information.

**Data Analytics**

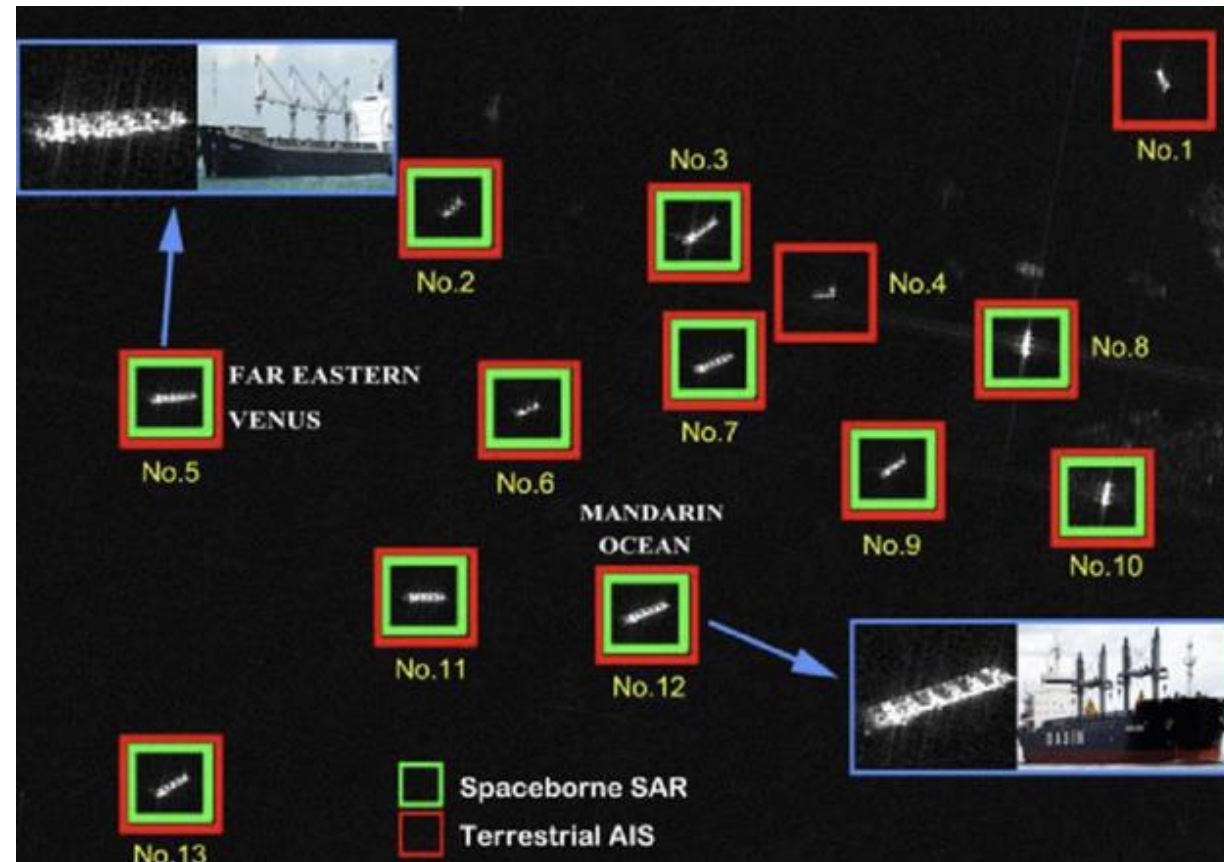

*Integrating conventional monitoring systems (AIS, VMS, etc...) alongside space-based imagery coupled with analytics to enhance maritime surveillance*

# Enhancing Maritime Surveillance Using Space

## Enabling Dark Vessels' Detection

Satellite imagery is the **only** technological source to identify and locate dark vessels.

Utilizing optical imagery or SAR and matching their input with AIS and VMS data to identify and locate Dark vessels.

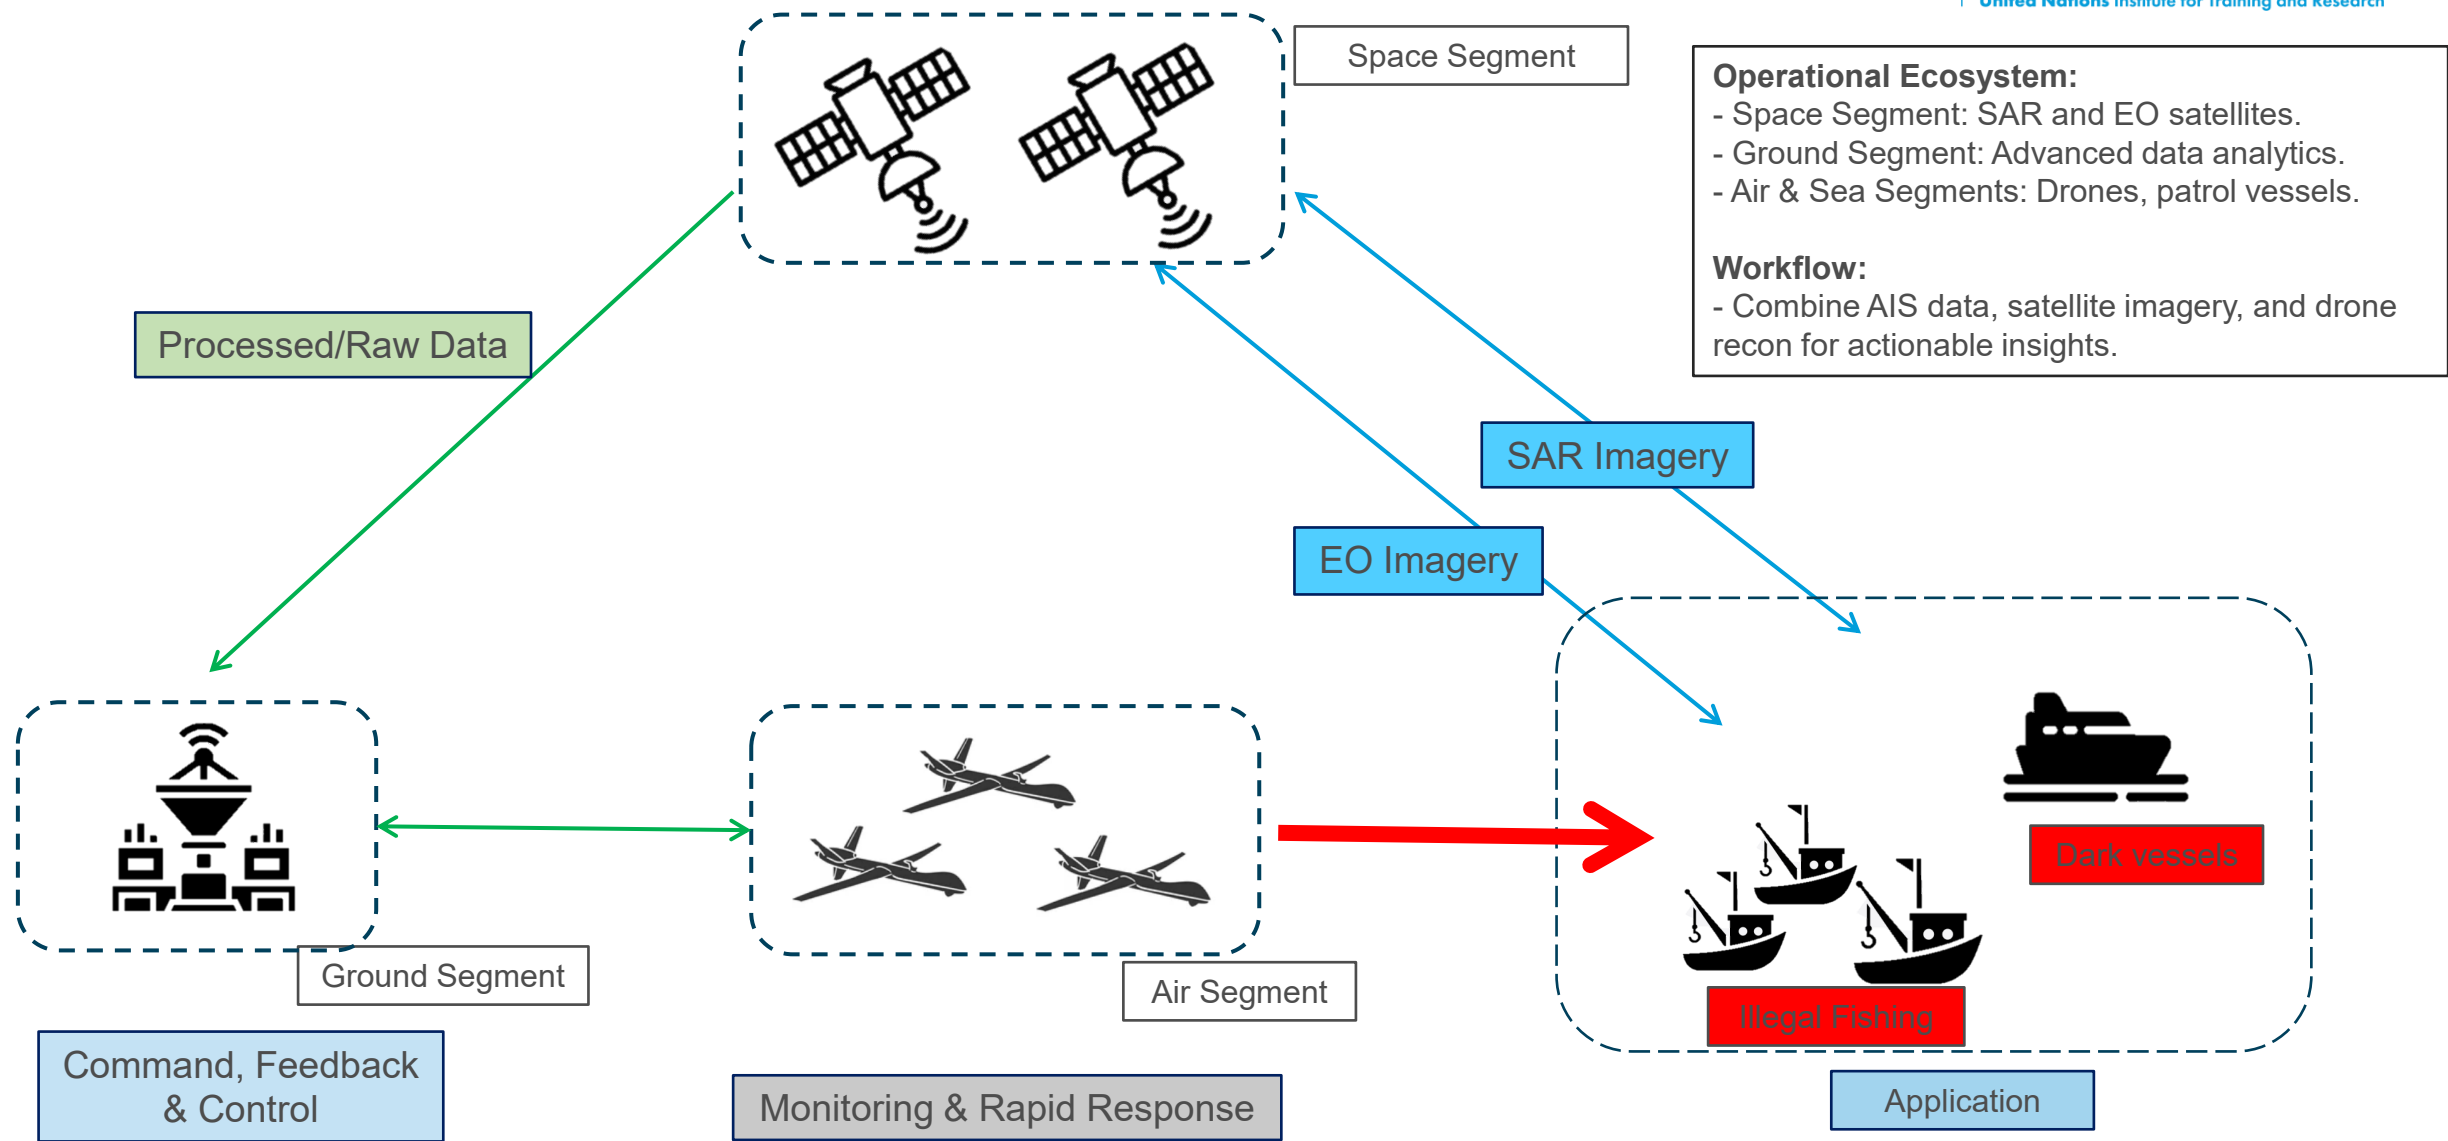

Dark vessels and their activities, detected via satellite, provide crucial forensic evidence to expose and prove illicit operations at sea.

Satellite imagery of runway construction at Fiery Cross Reef in the Spratly Islands dated Feb. 6 and March 23 by Airbus Defence and Space. PHOTO: CNES 2015, DISTRIBUTION AIRBUS DS/IHS: 1535921

# Combined Terrestrial, Aerial, and Spatial System Architecture for Maritime Security

## Capacity Building

- Introduction to Satellite Systems for Enhancing Security
- Applications of Satellite Imagery in Daily Operations
- Hands-On Training with Open Source & Commercial Satellite Imagery Tools.

- Tailoring System Architecture
- Local Research Input Points

- Basics Knowledge Transfer
- Fundamental Capacity Building

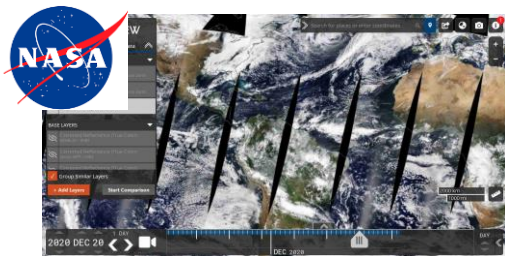

- 10+ Specialized Modules
- Operational Level Readiness

# Hands-on Demonstration

## AOI definition & Intel analysis

Open-source validation

## Pre-acquisition research

Open-source validation

## Satellite image procurement

3<sup>rd</sup> party procurement  
(if needed)

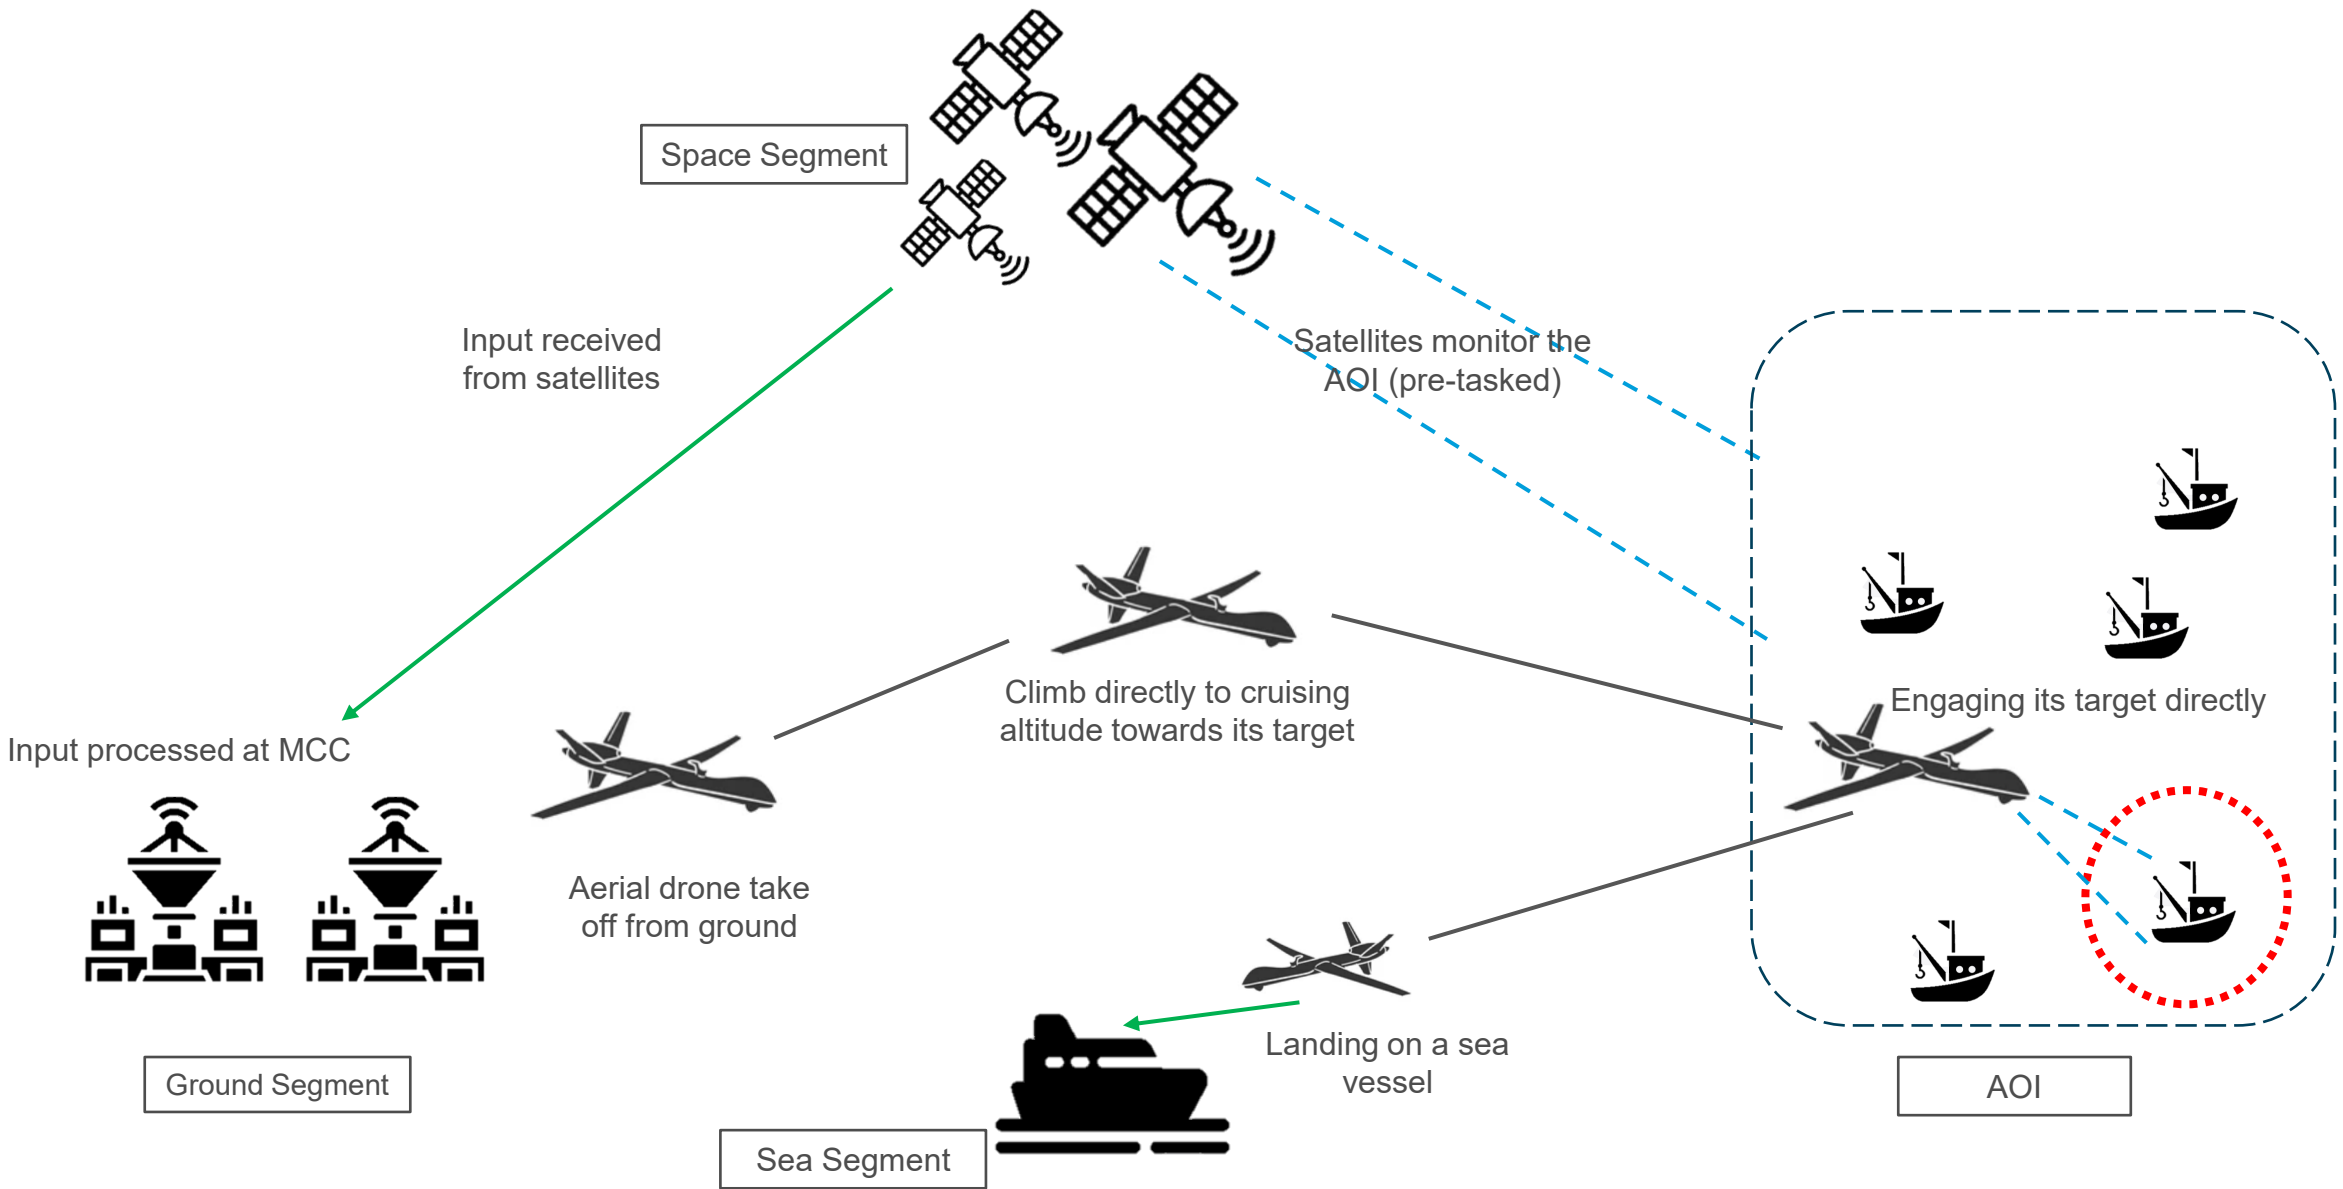

# Hands-on Demonstration

# Demonstration Missions Planning and Execution

# Thank You

We hope you enjoyed the presentation
